

We're writing to let you know that the two journals of the International Glaciological Society, *Journal of Glaciology* and *Annals of Glaciology*, are beginning a partnership with authoring tool Overleaf. If you're thinking of submitting to either of the journals, this tool is now a freely available option for writing your article.

Overleaf is a free, online writing tool which offers the following benefits:

- Intuitive LaTeX formatting, whether you're familiar with LaTeX or not. This can be particularly helpful if you and your co-authors have varying levels of understanding of LaTeX.
- Real-time online collaboration with co-authors.
- Version control features to help you keep track of multiple iterations of your manuscript.
- Pre-formatted templates and direct submission to both journals.

If you're interested, you can learn more about Overleaf here [link to <https://www.overleaf.com/tutorial>], or you can find our templates here:

AOG: <http://bit.ly/2eZwy9J>

JOG: <http://bit.ly/2fqJCW5>

You also have the option of using the [JOG template in Overleaf](#), an online tool that enables authors to:

- write their article in IGS style
- save versions that can be shared with and edited by co-authors
- submit the final article directly into the ScholarOne system.

The Overleaf template is based upon LaTeX but contains a rich text mode; you do not have to be a LaTeX expert in order to use it. It could be particularly useful if you are collaborating with other authors. At the end of the Overleaf process a clean PDF is transmitted to ScholarOne as the main manuscript with the LaTeX source files supplied in a zip file for the production team if the article is accepted.
